## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-9, drawn to a gateway in an IP network classified in class 370, subclass 401.
- II. Claims 10-18, drawn to hand-off control, classified in class 370, subclass 331.
- III. Claims 19-24, drawn to roaming, classified in class 455, subclass 432.1.
- IV. Claims 25-27, drawn to updating routing information (routing table), classified in class 370, subclass 389.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II, III, IV are related as combination and subcombinations.

Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination evidence claims 1-9 do not set forth the details of the subcombination methods for hand-off, roaming and routing. The subcombinations have separate functions to perform hand-off control (claims 10-18), roaming control (claims 19-24) and routing.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and the search required for each of the group is not required for other groups, restriction for examination purposes as indicated is proper.
